

Save Even MORE Time by Adding Phoenix Kiosk to Your EHR

What is Phoenix Kiosk?

Phoenix Kiosk is an integrated tablet-based patient check-in solution that works with your Phoenix Ortho EHR software suite to simplify patient intake and eliminate front office bottlenecks.

How Does Phoenix Kiosk Help?

Speed Up Patient Intake.

Your patients can check themselves in and have their health histories (and other data) automatically uploaded to their EHR patient chart.

Reduce Paperwork Errors.

Automatic sharing of information between the Kiosk, EHR and PM software eliminates manual data entry errors—saving time and headaches.

Streamline Billing.

For users of the Phoenix Ortho practice management (PM) integrated software, Phoenix Kiosk allows patients to pay copays, deductibles & balances from the Kiosk at check-in.

Better Data Capture.

By eliminating errors and enforcing mandatory form fills in the electronic check-in process, you can ensure better data capture for billing and care.

Save Labor on Patient Intake.

Instead of manually entering or scanning forms or bubble sheets, you can use digital forms that automatically upload to the patient chart.

Increase Patient Satisfaction.

Delays in the patient care process negatively impact patient satisfaction. Eliminating check-in bottlenecks helps improve satisfaction.

**Save Time. Reduce Paperwork.
Improve Patient Satisfaction.
